1. Introduction

If you're interested, take a look at one of my papers [1]. Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

2. Compiling the PDF

I use the command line to compile my PDF files. Run `xelatex paper.tex`

to compile the PDF. Every time you modify the `refs.bib` bibliography file, you will need to run

```
xelatex paper.tex
bibtex paper.aux
xelatex paper.tex
xelatex paper.tex
```

to correctly format the bibliography. We include bibtex formatting, rather than the more powerful and user-friendly biber back-end, because Arxiv submissions require a bibtex back-end.

3. Figures and Tables

We can use the usual commands, with full flexibility, to generate figures and tables. For example, Table 1 details some important lipid membrane parameters, and its location can be specified using the usual

Sym.	Parameter	Value	Ref.
k_b	Bending modulus	$10^2 \text{ pN} \cdot \text{nm}$	–
Λ	Surface tension	10^{-3} pN/nm	–
ζ	Membrane viscosity	$10 \text{ pN} \cdot \mu\text{s/nm}$	–
μ^\pm	Bulk viscosity	$10 \text{ pN} \cdot \mu\text{s/nm}^2$	–

Table 1: Dimensional parameters.

[tbh!] parameters. Note that we use the command `\resizebox{\linewidth}{!}{ }` to vary the text size such that the entire table fits into a single column. We can also make a full width table using `\begin{table*}` and `\end{table*}`, as demonstrated with Table 2.

4. Example Section
